1 Introduction **2**
1.1 Question 1 2

1 Introduction

Prose goes here. Write in **bold** and *italic* just like in normal Markdown.

1.1 Question 1

The next block is an R code chunk. Everything between the triple backticks runs when we knit.

```
data(iris)
model <- aov(Sepal.Length ~ Species, data = iris)
summary(model)
```

```
##              Df Sum Sq Mean Sq F value Pr(>F)
## Species       2  63.21  31.606   119.3 <2e-16 ***
## Residuals   147  38.96   0.265
## ---
## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
```

Interpretation of the ANOVA goes here, again in prose.

```
boxplot(count ~ spray, data = InsectSprays,
        col = "#dbeafe", border = "#2563eb",
        xlab = "Fertilizer", ylab = "Yield (Mg/ha)")
```

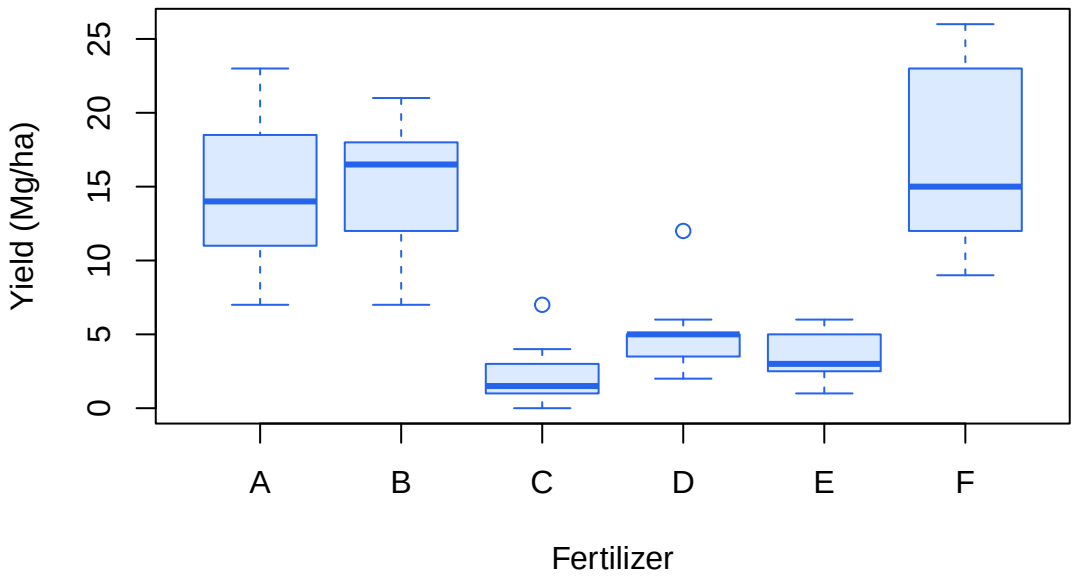

Figure 1: Yield by fertilizer

The value of 1234 * 5678 is 7.006652×10^{6}

My name is $ShafinAhmed$
